DIFFERENCE BETWEEN A LOGON SCRIPT AND A STARTUP SCRIPT?

Scripts (Startup/Shutdown): These scripts run on the **Local System** account.

Scripts (Logon/Logoff): These scripts run on the **User** account and not on the **Administrator** account.

- **Scripts (Startup/Shutdown)**: Use this extension to specify the scripts that run when you start and shut down the computer. To configure the computer startup and shutdown scripts, start the Group Policy snap-in, expand **Computer Configuration**, expand **Windows Settings**, click **Scripts (Startup/Shutdown)**, and then in the right pane, double-click the script that you want to configure.

- **Scripts (Logon/Logoff)**: Use this extension to specify the scripts that run when a user logs on or logs off the computer. To configure the user logon and logoff scripts, start the Group Policy snap-in, expand **User Configuration**, expand **Windows Settings**, click **Scripts (Logon/Logoff)**, and then in the right pane double-click the script that you want to configure.
