

SCENARIO

How do I incorporate the paste special (**using values**) feature into the following code?

```
Range("A1:A2").Copy Destination:=Range("C3")
```

SOLUTION

From: **Jack in the UK (OZGRID FORUM)**

Here I have written three procedure hope they help, chose which is for you, a bit more code but gets around all the issues you have and is a better way to program for your task.

First Method

```
Sub BestVersion()  
    ' Jack in the UK  
    ' [url]www.excel-it.com[/url]  
    '//Range("A1:A2").Copy Destination:=Range("C3")  
    '  
  
    Dim rSource As Excel.Range  
    Dim rDestination As Excel.Range  
    Set rSource = ActiveSheet.Range("a1:a2")  
    Set rDestination = ActiveSheet.Range("c3")  
    rSource.Copy  
    rDestination.Select  
    Selection.PasteSpecial Paste:=xlPasteValues, _  
    Operation:=xlNone, _  
    SkipBlanks:=False, _  
    Transpose:=False  
    Range("A1").Select  
    Application.CutCopyMode = False  
  
    valKill:  
    Set rSource = Nothing  
    Set rDestination = Nothing  
    Exit Sub  
End Sub
```

Second Method

```
Sub LongHandVersion()  
    ' Jack in the UK  
    ' [url]www.excel-it.com[/url]  
    '//Range("A1:A2").Copy Destination:=Range("C3")  
    '  
    Range("A1:A2").Select  
    Selection.Copy  
    Range("C3").Select  
    Selection.PasteSpecial Paste:=xlPasteValues, _  
    Operation:=xlNone, SkipBlanks:=False, Transpose:=False  
    Range("A1").Select  
    Application.CutCopyMode = False  
End Sub
```

Third Method

```
Sub LongHandVersion_Better()  
    ' Jack in the UK  
    ' [url]www.excel-it.com[/url]  
    '//Range("A1:A2").Copy Destination:=Range("C3")  
    '  
    Range("A1:A2").Copy  
    Range("C3").Select  
    Selection.PasteSpecial Paste:=xlPasteValues  
    Range("A1").Select  
    Application.CutCopyMode = False  
End Sub
```
