

## HTML/CSS - Create a glowing border around an Input Field

### SCENARIO

I want to create some decent inputs for my form, and I would really like to know how TWITTER does their glowing border around their inputs.

I also don't quite know how to create the rounded corners :-/

### SOLUTION (1)

Here you go:

```
input {
  border:2px solid #dadada;
  border-radius:7px;
  font-size:20px;
  padding:5px;
}

input:focus {
  outline:none;
  border-color:#9ecaed;
  box-shadow:0 0 10px #9ecaed;
}
```

## **SOLUTION (2) by HeelpBook Staff**

If you want a better compatibility through multiple browsers and even an **HOVER** effect (when mouse is over your input form) you could use the following code:

```
input {
border:2px solid #dadada;
border-radius:7px;
font-size:20px;
padding:5px;
}

input:focus {
outline:none;
border-color:#9ecaed;
box-shadow:0 0 10px #9ecaed;
-moz-box-shadow: 0px 0px 4px #9ecaed;
-webkit-box-shadow: 0px 0px 4px #9ecaed;
}

input:hover {
outline:none;
border-color:#9ecaed;
box-shadow:0 0 10px #9ecaed;
-moz-box-shadow: 0px 0px 4px #9ecaed;
-webkit-box-shadow: 0px 0px 4px #9ecaed;
}
```
