

HOW TO REMOVE FILM STRIP (VIDEO SPROCKETS) FROM VIDEO THUMBNAILS (WINDOWS 7)

Thumbnails for video files in **Windows 7** contain a film strip overlay on the sides which consumes part of the thumbnail image. If you need to remove the **video sprockets / film strip** effect, there is a registry setting you need to change.

Click Start, type regedit.exe and press {ENTER}

Navigate to the following key:

```
HKEY_CLASSES_ROOT\SystemFileAssociations\video
```

In the right-pane, double-click **Treatment** and set its value data to **0**.

Here are the possible values...

Data	Effect
0	No Adornment
1	Drop Shadow
2	Photo Border
3	Video Sprockets

Exit the **Registry Editor**.

Logoff and log back in to your account. **Filmstrips** are now gone!
