

## HOW TO DISABLE INTERNET EXPLORER ERROR REPORTING

**Internet Explorer Error Reporting** reports crashes to **Microsoft** everytime the browser crashes, most of the time due to an addon or a browser extension. Mostly, we would not want to send the info to microsoft and click "**Don't send**" in which case this can be quite annoying.

Internet Explorer Error reporting can be disabled from the registry.

```
[HKEY_LOCAL_MACHINE\Software\Microsoft\Internet Explorer\Main]
```

```
HKEY_LOCAL_MACHINE
  \Software
    \Microsoft
      \Internet Explorer
        \Main
```

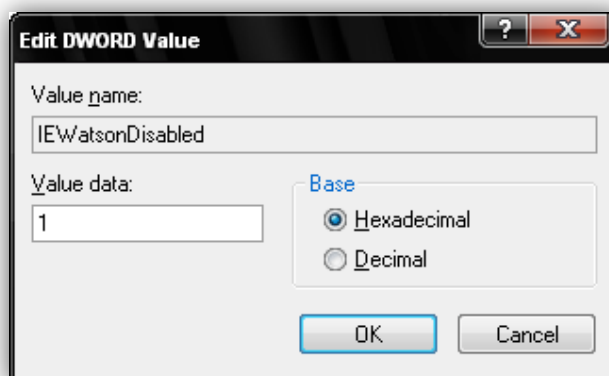

To disable, try the following:

**NOTE:** This should work in **Internet Explorer 5.5, 6, 7, 8**

1. Click **Start – Run**, type **REGEDIT** and click **OK**.
2. In the registry editor, navigate to:
3. Create a **DWORD** called "**IEWatsonEnabled**" and set its value as 0.

**NOTE:** To create a **DWORD**, right-click on the right pane and select **New** and then **DWORD** and name it as said. To set the value, right-click the **DWORD** and select **Modify**;

4. Similarly create another **DWORD** named “**IEWatsonDisabled**” and set its value as 1.
  5. Close the **Windows Registry Editor** and restart the computer for the changes to take effect.
- This will disable error reporting in **Internet Explorer**.
