

HOW TO REVERSE A STRING USING VBSCRIPT

```
str="uday"  
For i=len(str) to 1 step -1  
  strchar=mid(str,i,1)  
  resultstr=resultstr&strchar  
Next  
msgbox resultstr
```

...or you can use the built-in function in **VBScript**:

```
msgbox strreverse("uday")
```

ALTERNATE METHOD

Here is how we can Reverse a String without using any functions like **len** & **mid**:

```
Option Explicit  
Dim yourstr,r,letter,result,s  
yourstr="program"  
Set r=new regexp  
r.pattern="[a-z A-Z]"  
r.global=true  
set s=r.execute(yourstr)  
For each letter in s  
  result= letter.value&result  
Next  
msgbox(result)
```
