

LET USER SELECT A FOLDER FROM SCRIPT (VISUAL BASIC)

This little code snippet will let you to let an end-user to select a folder to pass to the logic to let your script to decide, for example, how to behave or what to do (decided by the programmer, obviously).

```
On error resume next

SET fso=createobject("scripting.filesystemobject")

SET wshShell=Wscript.CreateObject("Shell.Application")

dirPath=wshShell.BrowseForFolder(0, "Select the path", &H4000, "").items().item().path

IF right(dirPath,1) <> "\" THEN

dirPath=dirpath & "\"

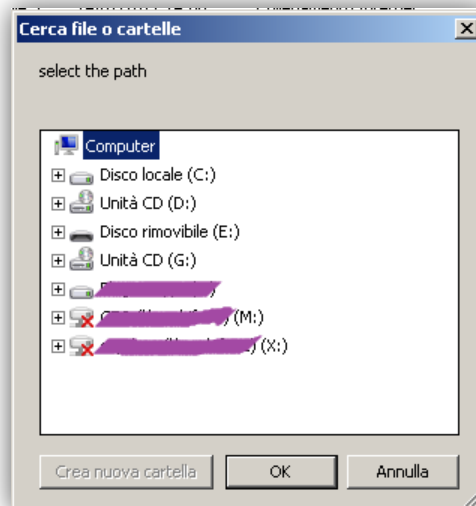

END IF

IF dirpath="" THEN

dirpath="You have to select a folder!"

END IF

msgbox dirpath
```

NOTE: this script use the **BrowseForFolder** method.
