

## MICROSOFT WINDOWS – OPEN MY DOCUMENTS FOLDER FROM COMMAND LINE

In **Windows XP**, we can use *userinit* command to open my documents folder in explorer.

This command can be used from **Run** window also.

In **Windows 7**, '*userinit*' command opens the **Libraries** folder, which shows links to *Documents, Pictures, Music and Video*. To open **Documents** folder, we can run the command '**Documents**' from **Run** window. However, this does not work from command prompt.

We can use '*start documents*' in command prompt to open the documents folder.
