RESIZE COMMAND PROMPT (CMD.EXE) WINDOW THROUGH COMMAND "MODE" (MICROSOFT WINDOWS)

SCENARIO

I want to resize the command prompt window in a batch file, is it possible to set a height and width through something I can just add in the batch file?

SOLUTION

```
mode con:cols=[whatever you want] lines=[whatever you want]
```

The **unit** is the number of characters that fit in the command prompt, for example:

```
mode con:cols=80 lines=100
```

…will make the command prompt **80 ASCII** chars of width and **100 of height**.
