

VBS SCRIPT – HOW TO PASS A VARIABLE FROM VBS TO A BATCH FILE

SCENARIO

I'm using **vbscript** to call a batch file. My script looks like:

```
dim shell
set shell=createobject("wscript.shell")
shell.run "a.bat"
set shell=nothing
```

My batch file is simple and looks like:

```
D:
cd D:\d
winzip32.exe -min -a D:\a
```

I want to pass a variable from a script to the batch file. lets say the destination folder. How do i do that?
Any help is very much appreciated.

SOLUTION

I think that you can just pass variables to the batch file. You can call it like:

```
shell.run "a.bat var1 var2"
```

And in your batch file, you can refer to them as:

```
%1 for "var1"
%2 for "var2"
```

And you can do this from **%1** to **%9**.
