VISUAL BASIC – EXTRACTING HOURS, MINUTES AND SECONDS FROM SYSTEM TIME

SCENARIO

I needed to extract the current **hours**, **min** and **sec** from the **System** time and store it in 3 variables - **h**, **m** and **s**.

SOLUTION

```
h = Format(Time, "HH")
m = Format(Time, "NN")
s = Format(Time, "SS")
```

HEELPBOOK STAFF: to extract correctly minutes from System date you will have to use **NN** and not **MM**.
