Visual Basic - VBA - How to declare a WorkSpace variable

SCENARIO:

I have Visual Basic 6.0
*I want to Dim a variable as **WorkSpace**.*
Been reading on it and wanted to check it out.
Anyway, it doesn't seem to be available. I have the Enterprise edition.
Any thoughts as to why it isn't an option?

Dim ws as WorkSpace*...is not working.*

SOLUTION

The solution is the following:

- Add a Reference to **Microsoft DAO3.x Object Library;**
- From **VBE** (*Visual Basic Editor*) go to **Project ---> References ---> Microsoft DAO3.x Object Library;**

Now you could use/declare a variable as workspace by writing:

```
Dim variable As DAO.Workspace
Dim variable As Workspace
```
