WINDOWS XP – REMOVE SAVED PASSWORDS

Windows XP does not offer a very easy way to review or remove the saved passwords though. If you follow the steps below though you can access a graphical interface to add, remove or edit the saved passwords on a given system.

1. Click **Start** and select **Run**;

2. In the **Open** field type:

```
rundll32.exe keymgr.dll, KRShowKeyMgr
```

3. Once the **Stored Usernames and Passwords** interface opens you can select any of the entries and select **Properties** to view the existing information;

4. To remove a saved password you can select one of the entries and select **Remove**. A confirmation screen will appear. Click on **OK** and the account will be removed;

5. You can add additional saved passwords as well by clicking on the **Add** button and entering the appropriate information;

6. Repeat the steps above as needed to add, remove or edit saved passwords;

7. When you are done using the interface click the **Close** button;
