
WORDPRESS – HIDE ADMIN ‘HELP’ TAB

Code:

```
<?php

// Hide admin help tab

function hide_help() {

echo '<style type="text/css">

#contextual-help-link-wrap { display: none !important; }

</style>';}

add_action('admin_head', 'hide_help');

?>
```

Instructions:

The ‘help’ tab in the top right corner of the **WordPress** admin is most of the time unnecessary for your clients. With some simple **CSS** it’s possible to hide this tab.

Simply paste this piece of code in your **functions.php** file.
